

CORE SYSTEM

TRUSTprocessor is a true General Ledger-based, in-house system for trust and fund accounting. It remains a favorite with management, operations staff and auditors.

Comprehensive functionality and versatility have been combined into one system, with a variety of management tools. Our relational database uses an open architecture as the foundation for the software.

We offer a complete client-focused solution.

The TRUSTprocessor core system forms a solid foundation for this software. You save money by licensing only the add-on modules your organization needs. Custom programming is available to fit unique situations. Features in the core system include ...
